(954) 257-8620

HONEYBEES' COLONY LOCATION

The honeybees' colony is located underneath a wooden storage/shed on the rear of the property. The bees are entering the structure through an opening/hole located on the bottom of the outside wall.

Based on the Thermal Imaging Mapping, the honeybees' colony is not inside the wall. It is located underneath the floor on the rear right corner of the shed.

WORK INCLUDED

DEMO: The removal of portion of the shed's plywood floor and, if necessary, the removal of portion of the outside wall is included in this estimate.

SCOPE OF WORK / WORK DESCRIPTION

- The removal and relocation of the honeybees' colony will be as follows:
- 1 Removal of the floor/plywood and/or opening the outside wall to access the colony;
 - 2 Removal of combs and honey;
 - 3 Vacuuming/removal of bees and stray bees near the area during removal;
 - 4 Setup of a TRAP BOX outside the shed near the original entrance (hole) where the honeybees access their colony. The TRAP BOX is necessary to catch the forages bee that will return to the colony during the day. The TRAP BOX will be removed either on the evening of the removal or on the next day after the removal, which is based on the number of bees returning from foraging.

WORK NOT INCLUDED

CONSTRUCTION REPARATION/RESTORATION (Patching, insulating, and restoring drywall or wood surfaces):

The reparation/restoration of the DEMO necessary to access the honeybees is not included in this estimate. COMBEENATION LLC. does not provide any type of construction/remodeling/restoration services necessary to fix the damage when accessing, removing, and relocating the honeybees.

HONEYBEES' BEHAVIOR

The removal, relocation, and cleaning the area where the honeybees had established their colony does not guarantee that the honeybees will not return to the location. The customer must seal all the possible entrances at the location to prevent future honeybees' swarms from using the same area/structure.

PRICE / VALUE The estimated value to remove the honeybees' colony on the above location will be as follows:

SERVICE / ITEM DESCRIPTION	DETAILS	ESTIMATED COST
Inspection and Set-Up	On site assessment, honeybees' identification, safety preparation and Thermal Imaging Mapping	\$50.00
Swarm / Colony Removal, Clean-Up	Extracting bees, comb, and honey (labor and specialized vacuum equipment). Vacuuming stray bees and cleaning honey to prevent mold.	\$300.00
Structural Opening	Opening/removing drywall or exterior siding to access the hive cavity. Opening/removing plywood floor to access the bees.	\$150.00
Repair of Structure	SERVICE NOT INCLUDED	SERVICE NOT INCLUDED
TOTAL ESTIMATED		\$500.00

* Prices are subject to change if the scope of work or conditions change.

PAYMENT
The payment must be made in cash or from Zelle to COMBEENATION LLC. Account.

Zelle | Account Name: COMBEENATION LLC.
